## RUDY PROJECT IS THE CHOICE OF CHAMPIONS.

Athletes are at the core of Rudy Project's heritage and mission; in fact, our products have been worn and tested by thousands of world-class athletes and premiere organizations in a variety of sports. Everyday, all over the world. For more than 30 years Rudy Project has been committed to technology and technological innovations that offer unique solutions for athletes and weekend warriors.

# RUDY PROJECT 2016 OFFICIAL TEAM SUPPLIER

## CYCLING

## MOUNTAIN BIKE

All athletes and/or teams (names and/or pictures) shown in this catalogue are referred only and exclusively to the year 2016.

## GUARANTEED UNBREAKABLE FOR LIFE

ImpactX® lenses are guaranteed unbreakable for life. The molecular semi-rigid properties are developed exclusively for Rudy Project and ensure the physical protection of your eyes against impacts, chemical and atmospheric agents; but because they are semi-rigid they will also minimize injuries during impact of fall.

**IMPACTX LENSES**

**CONVENTIONAL LENSES**

Building on ImpactX® technology and after years of laboratory research and field tests with professional athletes, Rudy Project is proud to introduce ImpactX® 2, a new array of technical lenses perfected with unparalleled cutting-edge photochromic particles, providing unique climatic management technology: getting dark from low to high light transmission within few seconds and tailored to reach a custom color from an initial clear state, ImpactX® 2 lenses will enhance contrast, even in darker conditions, they will improve visual acuity and depth perception while providing unparalleled eye protection.

## LIGHTWEIGHT

ImpactX® lenses are 16% lighter than CR-39 and 10% lighter than polycarbonate; they have lower internal stress and chromatic dispersion than polycarbonate, resulting in sharper images, higher definition, reduces "rainbowing", and more visual comfort. The program offers cutting-edge photochromic and polarized technology for unparalleled weather management.

## PHOTOCHROMIC TECHNOLOGY

Unlike most photochromic standard lenses, ImpactX® lenses are fused in the mass of the polymer itself with a complex manufacturing process, making it more resistant and clearly optically superior to most competitors.

## EXCLUSIVE SEMI-RIGID PLATFORM

ImpactX® is a family of patented polyurethane optical polymers, transparent and unbreakable, originally developed for military and aerospace requirements to provide bullet-proof, transparent, and light-weight material capable of providing superior protection, reliability and longer lasting performance than polycarbonate.

## SUPERIOR OPTICS

ImpactX® lenses boast breakthrough photochromic semi-rigid molecular properties formulated exclusively for Rudy Project and represents today the most advanced technological solution in the fields of vision protection. Thanks to their transparency and superior optical quality, lenses made in ImpactX® ensure sharp vision and unbeatable comfort.

characteristics	GLASS	CR39	POLYCARBONATE	POLYAMIDE	IMPACTX
density gr/cm³	2,53	1,32	1,22	1,01	1,11
refractive index	1,52	1,50	1,59	1,51	1,53
Abbe number	58,4	57,8	29	52	45
chemical resistance	good	good	poor	medium	good
stress cracking	fragile	fragile	sensitive	sensitive	not sensitive
photochromic	yes	yes	no	no	yes
suitable for sports	no	no	good	medium	excellent

## HDR HIGH DYNAMIC RANGE

In addition to a faster activation, the innovative photochromic pigments specifically developed for the new ImpactX 2 lenses\*, incorporate an advanced filter function which scientifically modulates the wavelength of light passing through the lens: by eliminating a portion not perceived by our eyes and optimizing its spectrum, the HDR technology provides extraordinary visual performance. While maximizing the chromatic range, perceived benefits include superior perception, sharper image and unparalleled enhanced contrast definition.

**SUPERIOR PERCEPTION - SHARPER IMAGE - MAXIMIZED CHROMATIC RANGE - ENHANCED CONTRAST DEFINITION**

no **HDR** / conventional lens

with **HDR** / High Dynamic Range

# PHOTOCHROMIC POLARIZED LENS TECHNOLOGY

**NO Polarization**

**IMPACTX®  
Polarized Photochromic**

Conventional  
polarized lenses

The ImpactX® Polarized Photochromic lenses offer razor-sharp clarity and cut glare while allowing you to see your digital read outs. Years of research with professional sailing teams have allowed Rudy Project engineers to develop a tailored polarization technology scientifically laminated to read onboard polarized GPS LCD screens without compromising clarity, performance and quality of the lens. Truly amazing technology!

## LASER COATING

Engineered for sunny days and bright light conditions, the LASER coating is a specific chrome mirror finish offering higher sunshine protection while boasting superb cosmetic appearance.

The photochromic laser coating is developed to reduce lens glare with bright light conditions. Thus, we strongly recommend to use the ImpactX®2 and ImpactRX laser lenses during daylight hours and not at the twilight.

Rudy Project's award winning ImpactX technology is available in both plano and prescription lenses in most of our sport and casual sunglasses. Now you can have the same superior lens technology even if you have a prescription !

## RUDY PROJECT TECHNOLOGY | **RP OPTICS**

For particular light conditions, Rudy Project offers technically advanced specialty lenses with high visual quality tailored to your needs. The various lenses enable you to perform and excel in any light or atmospheric condition you may encounter.

RP Optics is a design philosophy that aims to improve visual performance and eye protection by means of selective lenses with high optical and mechanical performance, combined with the most advanced technologies and scientific applications.

Our lens program has features common to every type of lens, such as neutralizing ultraviolet radiation completely up to 400 nm (UV 400 Protection), and maintains colors integrity even with the dark filters. We believe it is not enough to protect the eyes from hazardous radiation and external agents. It also important to enhance visual acuity and minimize distortion, while offering high quality optics suitable for sports. In some extreme conditions an athlete must rely on technologies to enhance performance and minimize distractions. For this reason, we have expanded the range of filters with specific treatments including antifog, hydrophobic, and photochromic technology.

Always at the forefront of technology, our lenses guarantee visual acuity and physical protection of the eye. High visual quality lenses have the following properties/benefits:

- **REDUCE GLARE - ENHANCE CONTRAST**
- **PROTECT FROM ULTRAVIOLET RAYS**
- **ENSURE "TRUE" VISION WITHOUT DISTORTION OF COLORS**
- **PROTECT AGAINST EXTERNAL AGENTS.**

## RUDY PROJECT TECHNOLOGY | **COMFORT**

### **TOTAL COMFORT**

All our sunglasses are entirely conceived to offer an unparalleled comfort and a perfect fit. Designed by biometric engineers, tested by professional athletes, most of our products incorporate phenomenal comfort solution, complete adjustability and full customization.

Our products perfectly fit the physical features of each ethnic group.

### **360° FULLY ADJUSTABLE**

The 360° Fully adjustable Tips can be adapted in any direction by applying light pressure and thanks to an innovative system - the T-Lock - they can be replaced or changed to create a completely customised fit and perfect grip.

Adjustable nosepieces are outstandingly comfortable and offer an exceptional fit for any shape of face: the Ergonose System which can also be used to adjust the glasses' height and their distance from the face to prevent misting.

## QUICK CHANGE INTERCHANGEABLE LENS SYSTEM

The system of interchangeable lenses called Quick Change allows you to easily and swiftly change out lenses to manage any light condition and visual comfort. Rudy Project offers superior optical solutions for weather management.

## INTEGRATED AIR CONDITIONING

No more misting fog, but a totally clear and bright vision. Special air channels on the inside of each temple allow airflow to reduce thermal shock ensuring a perfect vision and comfortable ventilation.

## VENT CONTROLLER

No more fog, crystal clear vision: our patented Vent Controller is a simple yet practical innovation allowing air flow control coming from the lens intake to reduce thermal shock to prevent fogging, ensure perfect vision and comfortable ventilation. It can be locked easily, closing airflows in a snap.

### **SAFETY** PROJECT

Rudy Project is a leading name in research and development in fully advanced helmets and sunglasses for complete fall protections. Advanced technology tuned with cutting-edge optics and helmets, the art of making extraordinary sport safety products.

We are committed to providing superior safety through integrated hinges and soft, thermoplastic elastomers, which prevent injuries in the event of falls, impact and collisions.

Our products are designed and planned for sports, incorporate state-of-the-art technology and ensure a matchless and comfort fit.

We extend our sincere gratitude to the thousands of customers who send us emails, tweets, posts and letters of appreciation for our products and service. It truly is the highest honor we can receive, and it's what motivates all of us at Rudy Project to do what we love doing - designing and creating the best products in the world.

*Hello Rudy Project Team,*

*I just want to give you feedback, that your helmet saved my life. By collecting a lot of energy and set it into "destroying energy" of your helmet what prevents to come all this energy to my head.*

*This was a bicycle accident which took place on April 15th here in Germany. Nevertheless I have 4 broken backbones two in the neck area and two in the breast. But it's all OK it could be repaired and it will heal without any paralysis.*

*I sent the pictures to you because I think this will show you how the energy was distributed into the helmet and what was destroyed and how well the helmet fits on the head.*

*Honestly spoken I just realized the severance of the accident after I took off the helmet and realized how splashed it was but it felt that the helmet covered my head up to the end.*

*So I hope this demonstrates how efficient you designed this helmet between the constraints of defined stability and ventilation. Perhaps this gives you further information for future improvements or prevents you from "improvements" which are from the safety aspect contra productive. The helmet itself is secured by the police for evidence. The pictures I got from the police.*

*I do have already ordered at my absolutely preferred bicycle shop a new one Rudy Project yellow fluo black Helmet. :-)*

*Thanks and best Regards*

*Klaus*

FOTONYK  
RUDY PROJECT RESEARCH AND DEVELOPMENT

### DESIGN INNOVATION

Innovation, research, technology, safety and style are the core concepts of our products' revolutionary design. Dynamic and attractive lines make our collection unique, stylish and avant-garde, a clear result of constant innovation and Italian manufacturing, something that we care about. Our R&D team draws inspiration from Rudy champions and ambassadors to design revolutionary eyewear and helmets to enrich our collections year by year and to meet athletes and sports enthusiasts' different demands.

# RESEARCH AND DEVELOPMENT

Technology and advanced science are the heart of Rudy Project.  
Our craftsmen use the highest quality materials and manufacturing techniques to create lightweight,  
comfortable and extremely functional eyewear.

 **made in italy**  
technically cool eyewear since 1985

# CONCEPT

SYNFORM  
PROFLOW

## HI-TECH SYNFORM TECHNOLOGY IN YOUR POCKET

Built upon 3 years of development with professional athletes and mechanical engineers, the Synform is a one of a kind, completely foldable performance sunglass. The second you have it in your hands, you will immediately feel the meticulous attention to details and materials that our engineers put into this stunning creation. It's yet another milestone for the Rudy Project Team in the world of optics and design.

## PATENTED SUSPENDED HINGE GEOMETRY

The ProFlow is loaded with many technologies, but the most striking visual element is probably the revolutionary 'flying' temple. Building on its awards-winning predecessor, the Ketyum, and thanks to advanced materials such as polyoxymethylene and aluminum, our engineers have developed an innovative evolution of the suspended hinge geometry, incorporating a unique built-in compression system.

## INNOVATIVE MATERIALS

Unifying seamlessly advanced design technology and materials science, most of our performance models blend cutting-edge ergonomic features with advanced aerospace alloys, such as our proprietary Kyntium, Grilamid® and advanced polymers to create extremely lightweight, versatile and high performance sunglasses.

## BUMPER TECHNOLOGY

Rudy Project has designed this innovative feature by combining safety and style elements.

The new Fotonyk model is characterized by the new bumpers - removable rubber inserts conceived to maximize athletes and sports enthusiasts safety in the event of crush or knocks. The Bumpers are integrated with the easy-to-open frame Vent Controller to prevent fogging and ensure perfect ventilation. The bumpers are also available in different colours, what better opportunity to customize your own Fotonyk!

## HELMET COMPATIBILITY

The innovative Garage System, designed exclusively for Rudy Project, is a case for sunglasses incorporated within the helmet itself. This system consists of two dividers placed in the back of the helmet with a double function: to keep the sunglasses in place and prevent contact between the temples and the head.

## WRAP AROUND GEOMETRY

Comfort and aerodynamics are intrinsically linked in the whole Rudy Project range of products. Our sunglasses have air vents located in the temples or in the frame to ensure constant air circulation and to prevent the lenses from misting, always guaranteeing clear and bright vision.

## POWERFLOW

Literally sculpted by the wind, the Tralyx redefines the pinnacle of eyewear bike technology. With its entirely new geometry package, unique and powerful dynamic design language, the Tralyx is extreme in its look and its performance. Outstanding lightweight styling and phenomenal comfort are combined with unobstructed wide peripheral field of vision and unparalleled heat dissipation solutions thanks to the innovative PowerFlow system: vents have been scientifically incorporated through the entire chassis to enhance air circulation while ensuring maximum aerodynamic efficiency and without disturbing vision. With the Tralyx, Rudy Project is taking a convincing step forward into the future while building over 30 years of technical innovation in the eyewear industry.

## LENS SHAPES

The quest for the perfect fit has always been a distinguishing feature of Rudy Project sunglasses and the new Tralyx lens shapes clearly demonstrate this continuing process. These new lenses are also available in the SX and XL sizes in order to fit different face shapes and to allow every sports enthusiast to live the Tralyx experience.

## ADAPTIVE TIPS

The all new Adaptive Tips have been designed to ensure compelling comfort superiority: thanks to its inner bendable steel core, the front portion of the tip can be very easily adjusted to create custom fit factor; moreover and by merging intelligently the use of soft polymers, surface geometry and our experience in bike helmet design, the rear portion of the tip will naturally flex without hurting the riders' skull when inserted for rest in Rudy Project proprietary helmet docks or traditional helmet vents. Combined with our latest generation fully adjustable co-injected Ergonose IX design, the Tralyx sets significant advance in comfort technology and makes it unrivalled in the performance eyewear arena.

# AERO HELMETS

BOOST 01  
WING 57

PHENOMENAL PERFORMANCE, INNOVATIVE TECHNOLOGICAL CONCEPTS, BREATHTAKING AERODYNAMICS AND DISTINCTIVE DESIGN LANGUAGE REDEFINE THE PINNACLE OF THE AERO HELMETS SEGMENT.

At Rudy Project our mission is to protect while elevating riders performance. Thanks to the constant feedback of professional athletes in both road and triathlon bike, countless hours at the Pininfarina wind tunnel driven by the renowned aerodynamic expert John Cobb, form factors and data analysis with experienced designers and engineers, we developed revolutionary helmets such as the Wingspan and the Wing57, leading us to virtually dominate the Lava Magazine helmet count at the Ironman World Championship Kailua-Kona Hawaii four years in a row. Building on 30 years of experience in aerodynamics and innovative styling we are introducing today a new milestone in the aero segment, the Boost 01.

## REMOVABLE OPTICAL SHIELD

The fully integrated and removal shield will ensure maximized protection and enhanced aerodynamics while eliminating annoying glare and eye fatigue. Building on Rudy Project RP-Optics advanced polycarbonate technology, the visor combines cutting-edge coatings superior optical protection against harmful UV rays minimizing eye strain.

## DORSAL RIDGE

Inspired by sharks, the dorsal ridge helps converting sideways force into a forward force, like it was a long tailed helmet. It gives more surface only when it is necessary, as with a cross wind, while it remains small for less frontal area effect.

## VENT COVER

Aero helmets are equipped with a set of removable and modular front vent covers. One closed and the other in a mesh configuration, which will allow to manage the airflow inside the helmet. Riders will be able to control ventilation and aerodynamic efficiency according to the environmental conditions and maintain body's efficiency.

**ATTENTION**

The Rudy Project helmets are engineered and manufactured with different specifications according to the markets of destination.

If your helmet bears a CE designation, it meets the requirements of the Council Directive 89/686/ECC and of the European technical Standard EN 1078.

If your helmet bears a CPSC designation, it meets the standard safety requirements of the U.S. Consumer Product Safety Commission.

If your helmet bears a AS/NZS designation, it meets the standard safety requirements of the Australian Standard AS/NZS 2063.

## **VORTEX KILLER SYSTEM**

One of the major breakthroughs results from the scientific combination of the overall helmet design geometry and the two side vents; the purpose is to aid in the straightening of the airflow over the rear of the helmet. To help in managing these Vortex eddy low pressure points, which create drag and instability, air is directed, through a proprietary patented channel system, over the neck and shoulder areas at a different rate or volume than the oncoming free air: we call this invention Vortex Killer or Air Straightener System. This system adds significantly more ventilation inside the helmet: the Air director creates a high/low pressure area, on each side, so that air coming from the right vent goes to the opposite side of the Director and then flows out. And vice versa for the other side. Acceleration of air means more ventilation to help with sweat evaporation (rider cooling).

## **AERODYNAMICALLY ENGINEERED BY JOHN COBB**

Designed with the aide of legendary aerodynamics guru John Cobb, the new Wing57 has undergone extensive wind tunnel testing to become the best TT helmet on the market. Through this testing, Rudy Project and Cobb developed a unique tail geometry that works best for all TT positions and back profiles. Proven to beat out most competing aero helmets in time simulations, the Wing57 will be, without question, the best aero helmet on the market throughout the triathlon and cycling worlds.

## JET STREAM REMOVABLE MAGNETIC TAIL

The Wing57 is equipped with an additional and removable magnetic aerodynamic tail that can be added to the Air Director as its extension, improving its performance depending upon rider's back and shoulders configuration.

## AIR DIRECTIONAL FLOW

The new shape of this helmet gives all the advantages of a NACA wing shapes (National Advisory Committee for Aeronautics) but avoiding the natural wind aligning energy cost of that shape itself due to cross winds.

## RUDY PROJECT TECHNOLOGY | **BOOST 01**

**BESIDES SAVING LIVES AND BEING FAST, WE ARE COMMITTED TO INNOVATION, STYLING AND COMFORT: WEIGHT, HEAT MANAGEMENT, EASING THE ATHLETES STRAIN WHILE RIDING ARE PRIORITY.**

The new Boost 01 is a true aerodynamic beauty, boasting unique and powerful functional design language. Extremely well vented, it incorporates many technological advances to lower aero drag by 12% compared to traditional road helmets, relocating the center of pressure point and reducing neck torque by 65%. The Boost 01 offers a unique and removable shield interface for full wraparound visual protection, enhanced flow dynamics and atmospheric management minimizing eye strain; its intelligent magnetic flip-up system will ease the athlete when putting the helmet on, while cutting fog and maximizing cooling during long rides. The Adaptable Air Control front vent cover can be easily removed for long distance or hot weather conditions, allowing massive front air intakes to cool the rider's head. Based on our patented Vortex Killer System the Boost 01 pulls air rationally while accelerating heat transfer to cool the rider's head very efficiently, making it an exceptional and functional dynamic sculpture, unmistakably Rudy Project.

**-12%**  
AERO DRAG

**-65%**  
NECK TORQUE

### **SUPERIOR VENTILATION**

New internal air channels and the all new top vent help guide the air and further accelerate the air flow out of the rear of the helmet. This gives a large increase in aiding heat transfer from the rider's scalp, one of the major cooling zones of the human body.

### **AIRFRAME COMFORT PADDING**

The airframe frontal padding is crafted with innovative materials such as Dry Foam and X-Static antibacterial fabric: the former is a special white foam which does not absorb the sweat while the latter favours transpiration. The padding has been designed to minimize the sweating process inside the helmet: the foam does not absorb the sweat while the fabric easily transpires and dries, avoiding the release of unpleasant smells and ensuring the best level of performance.

X-Static

Dry Foam

## DYNAMIC PRESSURE POINT

Using parts of the patented Vortex Killer System, there are new specific high radius lower edges along the bottom of the helmet. This links to the rear section which has new side scoops with specific NACA duct shaping, the Boost 01 is able to pull air around riders neck and off the shoulders for improved aerodynamics.

## UNIVERSAL DORSAL RIDGE

The refined dorsal ridge continues to help to convert sideways forces into a forward force. Thanks to the new lower and forward profile, it makes the Boost 01 to be more versatile in relation to the ever changing wind direction while almost eliminating the uncomfortable directional torque effect on the riders neck.

## ZERO TORQUE

The directional torque is the natural reaction of a wing shape to self-align with the outside wind forces and it is the main cause of discomfort on riders neck especially over long distance races.

The Boost 01 offers more than a 12% aero drag reduction compared to a traditional road helmet along with a 65% reduction in neck torque.

A male cyclist is shown in a dynamic, low-angle shot, leaning forward on his road bike. He is wearing a bright yellow long-sleeved cycling jersey, black cycling shorts, and a yellow Rudy Project helmet. He also wears yellow-tinted sunglasses. The background is a dark, rocky, and mossy forest setting, creating a sense of adventure and intensity. The lighting is dramatic, highlighting the cyclist's form and the texture of the forest.

WINDMAX  
STERLING  
AIRSTORM  
ZUMAX  
RUSH  
AVENGER  
SNUGGY  
JOCKEY

A COMBINATION OF TECHNOLOGY, EXTRAORDINARY COMFORT, LIGHTWEIGHT AND SUPERIOR PROTECTION.

For more than 30 years Rudy Project has been committed to quality, technology and innovations for sports. The Rudy Project helmets offer unsurpassed comfort and performance but are primarily scientifically engineered for protection, with the mission of saving lives. They are developed with experts including aerodynamic specialists, industrial designers, engineers, professional athletes and involving cutting-edge manufacturing to offer the highest degree of performance, ventilation and safety.

## FLOW THROUGH VENTILATION SYSTEM

Keeping your head cool and dry is essential for maintaining performance at the highest levels. Thanks to the shape and the positioning of the external air openings and the unique air channels inside the cap, our helmets are perfectly ventilated and very comfortable. The air vents have been designed to permit maximum dispersion of heat, ensuring your performance does not drop as a result of the heat, and effective evaporation of sweat.

## ELEVATE YOUR VISIBILITY

Riders safety is one of the main goal of Rudy Project. Helmets, sunglasses and our bikewear collection are designed to provide the highest standard of performance and safety. The new apparel line is manufactured with finest materials while bright and fluorescent colours ensure perfect visibility on the road enhancing riders security and drawing drivers' attention. Our bikewear is studied to match perfectly with our sunglasses and helmets elevating at the same time performance, safety, comfort and style of athletes and sports enthusiasts.

## SAFETY AND ENERGY DISTRIBUTION

Falls can prove to be very costly and have permanent consequences. The starting point for the development of Rudy Project's cycling and mountain bike helmets is the adoption of excellent quality materials which guarantee safety and reliability. This is why Rudy Project undertakes to use only highly-advanced materials which can absorb shocks and dissipate the mechanical energy without it being transferred to the head and body. The structure of our helmets combines expanded polystyrene (EPS), a material which can disperse the force caused by an impact through a plastic deformation and polycarbonate shell for increased durability and protection.

## RUDY PROJECT TECHNOLOGY | **HELMETS**

### TECHNOLOGY **ICEDOT** COMPATIBILITY

Rudy Project includes IceDot technology and provides one year's free registration for this innovative emergency service on a selection of helmets. Increase your safety on training sessions: fix the special sticker to your Rudy Project helmet then go to the IceDot site to key in the code you received when you registered. The code incorporates your clinical data to help the emergency rescue.

Thanks to IceDot's revolutionary new system, in the event of a fall or accident the emergency services will be alerted and your friends or family called on the phone numbers you selected. Purchase an IceDot sensor (sold separately) to increase your safety on the bike.

### **ICEDOT.ORG/RUDY**

ICEDOT Emergency identification and notification system 1 year free membership will be available on Wing57 and Windmax starting Fall 2015; available on Boost01 Spring 2016.

### **COMFORT INTERNAL PADDING**

One of the key quality element of Rudy Project helmet is its extraordinary head fit comfort. Most of our helmets are loaded with 2 interchangeable and washable paddings. Its design and position inside the shell has been scientifically studied to improve fit, ventilation and protection.

## MIPS TECHNOLOGY

AVAILABLE ON THESE MODELS:  
RACEMASTER  
RUSH

MIPS mimics the brain's own protection system with a unique low-friction layer between the head and the helmet. MIPS is scientifically proven to reduce some of the energy from an angled impact.

Red = High Strain

The graphic was generated using a finite element computer model based on measurements obtained from nine accelerometers in a Hybrid III crash test dummy head. The dummy head wearing a helmet was subjected to an angled impact using the MIPS test rig. The model illustrates strain in the brain from a similar angled impact when the dummy head is wearing a helmet without MIPS and a helmet with MIPS.

## ADJUSTABLE CUSTOM FIT

Rudy Project helmets are appreciated because of our legendary fit, the result of studies into ergonomics, design and material innovation and advanced manufacturing techniques. The retention system is constantly updated to improve stability and performance. The new RSR 9 system enhances the fitting: the structure is more wrap-around while precise micro-metric regulation and height adjustment provide a perfect personal fit.

### R.S.R. 9 RETENTION SYSTEM

### **GARAGE EYEWEAR DOCK**

Superior stability  
Innovative integrated lock system  
Signature Look.

### **HEXOCRUSH TECHNOLOGY**

The HexoCrush is one of the most advanced Rudy Project solutions. Based on the Cone-Head technology, this revolutionary feature is designed to maximize athletes safety by ensuring unprecedented level of security. The liner is molded with two different foam densities and the hexagon-shaped structure provides improved shock absorption by dissipating impact forces sideways and radially. The HexoCrush technology is incorporated within the Racemaster liner, which is lighter and guarantees lower g-force pressure than any other helmet in case of crashes.

When a shock occurs, the impact force is directed towards the head pushing the outer layer to compress. Simultaneously, the head presses in the opposite direction compressing the inner layer and the hexagons. In this way, energy is spread within the foam instead of towards the head and, thanks to the hexagons, the g-force pressure on the head is reduced.

## SUPERIOR VENTILATION

Ventilation is an essential feature for every helmet. It allows athletes to achieve the best standards of performance by keeping the head cool and dry. Rudy Project is committed to delivering innovative solutions to maximize both safety and comfort while maintaining critical airflows. The positioning and dimensions of the air openings have been studied to ensure the best aerodynamics and constant ventilation inside the cap. Air vents are designed and placed to enhance heat dispersion and sweat evaporation. Furthermore, the innovative tail is designed to reduce the formation of vortex and consequently neck torque.

## DIVIDER PRO

When small details make the difference: ultra-light, ultraflat yet robust, comfortable, easy to adjust.

# RX DIRECT / IMPACTRX

Offering freeform single vision and progressive lens design for performance sport wraps, ImpactRX® is the world's most advanced digital back surface lens program, fully personalized for your lifestyle. We've combined a revolutionary lens material with the best 8 base wrap design to create the best prescription sports lens in the world! Now available in 8 superlative platforms.

For more information please ask for the specific 'HiTech Prescription Solutions for Sport' catalog developed for opticians; contact your country official Rudy Project distributor (<http://www.rudyproject.com/customer-service/distributors/>) or send an email to [rudyrx@rudyproject.com](mailto:rudyrx@rudyproject.com) to receive your personal web credentials. Once activated you can immediately place orders.

OUR 1.6 ENTRY MATERIAL OF CHOICE FOR PATIENTS WITH HIGH PRESCRIPTIONS, OR WHEN LENS THICKNESS CONSIDERATION IS ESSENTIAL

Rudy Project created a new and innovative Hybrid material, dedicated to patients with stronger prescriptions: the ImpactRx High Index combines the best attributes of High Index, such as its extraordinary thinness, to the comfort of ImpactRX, offering strength and durability.

Main features include:

- LOWER DENSITY TO PROVIDE LIGHTER LENSES AND INCREASED COMFORT
- ENHANCED IMPACT RESISTANCE (UP TO 5 TIMES WHEN COMPARED TO OUR PREVIOUS HI-1.6 MATERIAL)
- IMPROVED COSMETIC FOR WRAP LENSES
- THINNER THAN COMMON HIGH INDEX 1.60 MATERIALS (UP TO 5%)

## ANTI-REFLECTION COATING

Lenses with higher indices also reflect more than standard plastic and glass. Because of this, anti-reflective coating is especially important. Additional reflections will be distracting in day to day activities such as night driving and computer use. Impurities, water drops, dust, scratches will heavily influence the comfort of high index lenses, for these reasons, Rudy Project offers diamond coat, our new premium coating.

## ATTENTION

For its highly engineered vision solution using extremely sophisticated edging equipments, all models of the ImpactRX and ImpactRX High Index collection are mounted and shipped directly and exclusively through our own laboratories according to selected sunwear geometry and original patient's prescription formula.

#### technical features

Density gr/cm3	1,20
Refractive index	1,59
Abbe Number	31
UV Cutout	385
Absorption	100% UVA UVB

#### WHAT IS POLAR 3FX?

POLARIZED LENSES effectively block reflected glare, a situation which occurs primarily near water or snow or off reflective surfaces nearby, such as car windows, metallic objects, etc. Light which strikes a horizontal reflective surface is reflected back into your eyes. You then get a "double dose" of light energy, some of which falls directly on to you and some that is reflected on to you. Polarized lenses offer an interesting advantage: because they dramatically reduce or eliminate the reflected light energy which might account for the majority of the annoying glare, you can use a lighter tint to achieve the same (or better) degree of glare reduction and comfort compared to non-polarized dark lenses.

#### PATENTED 3FX POLARIZED TECHNOLOGY

POLAR3FX coatings offer.

- Advanced visual acuity, depth of field perception, chromatic partitioning.
- Minimizes annoying staining and smudging for clean, unobstructed vision all the time.
- Highly scratch resistant.
- A unique and sophisticated fashionable look.

#### diamondcoat INCLUDED

- Rudy Project's unique multi-layer process provides excellent visual acuity and eliminates annoying back glare that causes eye strain and eye fatigue in bright light conditions.
- Reduced hue and ambient reflections.

#### diamondcoat™

#### WHAT IS DIAMOND COAT?

Diamond coat™ is an exceptional and powerful multi-layer coating engineered to eliminate lens glare, ghost images and halos from bright light or back reflections while offering a cleaner vision by preventing dust, water drops, scratches and finger marks on the lens.

Perfect for outdoor action and dusty environments, diamond coat™ will keep lenses sparkling and easy to clean. It will ensure a better comfort while providing outstanding lens durability.

The Rudy Project diamond coat™ is a superior treatment resulting from extensive research and provides the following features:

- anti-static layer against dust and impurities

- anti-reflection coating, cutting lens glare, ghosts and halos resulting from bright light

- enhanced protection against finger marks

- superior hydrophobic layers against water drops

- outstanding scratch protection, ensuring lens durability

#### COMPARATIVE GUIDE

The following graphs show the suitability for sport of common ophthalmic materials. The supremacy of ImpactRX comes through its incomparable resistance properties (against Impacts, scratches, stress cracking and chemicals) and its outstanding optical quality. ImpactRX High Index material shows good performances and cutting-edge optical quality too: it's density combined with the high refractive Index enhance comfort also in case of high prescription.

## TECH PILLS

- Nylon mount
- Clip base: 4
- Nylon groove milling: 0,8 mm x 0,8 mm
- We recommend spherical lenses
- Use Trivex, polycarbonate or high index 1.6 lenses

LENS MATERIAL	RECOMMENDED RANGE
index 1.53	- 3,00 + 2,00
index 1.60	- 4,50 + 3,50
index 1.67	- 5,00 + 4,00

The chart offers a general indication on the material of lenses to be used on prescription. The optician has the freedom to decide the final selection on the basis of the real requirements and prescription, fitting parameters (PD & H) and the shape of the lenses chosen.

## INDYO

- Ultralight design
- Low wrap
- Optical adjustable nosepiece
- Grilamid® optical removable clips

QUICK CHANGE

Our flip-ups are equipped with Quick Change interchangeable lens technology allowing players and athletes to manage any light condition on field, on bike or on the green. It is perfect for any sport where it is necessary to see true light quickly (e.g., baseball, biathlon, golf, shooting, archery, etc.) or eliminate fogging. The removable optical inserts can support a wide variety of prescriptions.

# **OPTICAL DOCK DIRECT CLIPS OPTICAL INSERTS**

# OPTICAL DOCK

The evolution of the Rudy Project solutions dedicated sports eyewear continues with corrective lenses, with a now even more complete and articulated product range that's capable of meeting any technical and economic requirements.

This is the pathway that led Rudy Project to develop the "Optical Dock": a full-rim Grilamid clip, available for the Rydon, Fotonyk and Stratofly models, that allows for ophthalmic lenses made from any type of unbreakable material to be inserted.

The Optical Dock is a veritable platform that's capable of ensuring the necessary lateral protection, while at the same time offering the possibility of mounting stock ophthalmic lenses thanks to the containment of the front wrap-around angle.

And while the Rydon Optical Dock represents the ideal solution for even the most demanding sportsmen in terms of comfort and fit, the greatest new development is the version dedicated to the Stratofly version, the entry-level eyewear model from Rudy Project's Technical Performance family. As the perfect solution for those in search of the best possible balance between price and quality, the Stratofly model can be combined with the Optical Dock full-rim clip accessory in order to gain a better appreciation for the quality of Rudy Project products.

# RX DIRECT CLIPS

If your customer is a contact lens wearer with eyes easily irritated during sport practice, or because he does not have the budget for prescription sport sun lenses such as ImpactRX, Rudy Project has another option: our RX Direct Clips allow opticians to easily edging prescription lenses in office without the need of complex cutting machines. Thanks to a patented smart mounting system, they can be removed in a snap. This solution offers patients the versatility of interchangeable clear and sun RX lenses in the same frame.

# OPTICAL INSERTS

Rudy Project has created RX inserts that can be snapped in behind the polycarbonate Rudy Project lenses. Thanks to our patented 'easy-in easy-out' system, our Clip-ons can be inserted or removed with ease. This is particularly useful when you want to wear your contact lenses or when cleaning.

1. When the template is not available, use the demo (or plano lens) as reference to cut the ophthalmic lenses.
2. The clip must be properly shaped according to the model of the glasses which should be applied before installation. Once set, you can determine fit parameters (PD and H), and deduct final considerations when mounting progressive lenses.
3. Before removing the clip to fit ophthalmic lenses, remember to take your references for the true horizontal axis.
4. The vertex distance is reduced when using an Optical RX insert: this should be taken into consideration before mounting ophthalmic lenses.
5. The winding angle of the RX Optical Insert may change according to the design and geometry of the eyewear on which it is mounted, and it is always much higher than the one found on a regular dress eyewear. This induces an horizontal prismatic deviation which will increase with the power of the lenses. Rudy Project recommends, as a general rule, to apply an horizontal shift of the lens in this way:  
+1.00 mm per eye in case of negative correction  
-1.00 mm per eye in case of positive correction
6. If the value of the spherical lens is more than +/- 3.00 diopters and given the high wrap of the Rudy Project frames, it is necessary to make the due considerations on the required horizontal prismatic compensation and to the reduced vertex distance.
7. Before mounting ophthalmic lenses, it is always recommended to check the centering of the lenses on the clip once housed in the frame; do not mount any prescription on a clip without frame.
8. For the best result when mounting lenses on the clip, Rudy Project suggests to refer to the regular dress eyewear of the patient: in this way the adaptation to the new device will be faster and easier.
9. Rudy Project recommends the fitting of ophthalmic lenses with spherical geometry. For best results, consider to mount lenses with optical design specific for wraparound frames.
10. The RX Insert is not compatible with ImpactX® Polarized lenses.

**OPTICAL CLIP  
SHOCK ABSORBER KIT  
(INCLUDED)**  
6 pcs.  
**AC 56 00 33**

The FR70 RX Optical Insert comes now standard with 3 pairs of proprietary shock absorber stickers; made out of a special polymer they will minimize scratches and vibrations resulting from the insert/correction lenses against the inner surface of the sun/plano lenses. To be mounted on the far edge of each prescription lens of the insert.

## ADVANCED FEATURES FOR HIGH-ALTITUDE AND EXTREME CONDITIONS.

Not just a sport, but a way of life, a philosophy of thought. Immersed in the silence of the peaks, climbing up a rockface or following a raging torrent are challenges to oneself and to nature, a nature that is magical, but also difficult and at times very dangerous.

For this very reason, Rudy Project offers lovers of mountaineering, climbing and rafting specifically engineered sunglasses to prepare them for any atmospheric condition.

## PERIPHERAL SHIELDS

The Airgrip model incorporates side shields to enhance protection from harmful peripheral sun rays, wind, other atmospheric elements and shocks caused by falls or knocks against rocks or branches. The peripheral shields are manufactured from a proprietary semi-rigid unbreakable polymer and they are easy removable for a regular use of the sunglasses.

OUTDOOR

## HI Altitude **HI-ALTITUDE** LENS

The HI-ALTITUDE lens is designed to protect your eyes from high illumination and dangerous UV rays; it transmits only 5,5% of light. Perfect for mountain activities, glacier and high altitude conditions, this special lens is tailored with triple anti-reflective coating layers and proprietary front Laser coating. For its exceptional light transmission level, these optics are not suitable for driving (Filter Category 4).

## HI-CONTRAST LENS

## HI Contrast

Our new HI-CONTRAST lenses enhance contrast and depth perception while providing unparalleled eye protection; its brown/amber base makes it a great "all around" lens, offering a balanced luminous transmission (18%) perfect for outdoor environments such as woods, rocks and natural colours in variable light conditions.

PERIPHERAL SHIELDS and COMFORT PADS INCLUDED  
Each Airgrip comes standard with a set of  
Peripheral Shields and Comfort Pads,  
according to the configuration.

not suitable for driving and road use

A male golfer is captured in the middle of a golf swing on a lush green course. He is wearing a white Srixon baseball cap, dark-tinted Rudy Project sunglasses, and a blue short-sleeved polo shirt with a small logo on the sleeve. He is holding a golf club with a white head. The background is filled with tall palm trees under a clear blue sky. The word "GOLF" is printed in large, bold, white capital letters over the lower left portion of the image.

EXCEPTION EVO GOLF  
STRATOFLY SX GOLF

**SPECIFICALLY TAILORED TO THE GREEN, UNPARALLELED EYE PROTECTION, SUPERIOR FIT.**

Concentration, determination, accuracy. These are the main features that golf requires of its players, often out in the field for several hours in highly changeable sun or weather conditions, in which the light changes constantly making it difficult to view the green. Par after par, wind, leaves or dust can affect the performance of the golfer.

For this, Rudy Project has created a series of specific golf sunglasses for those who play golf, to guarantee the performance of a champion.

## GOLF SUNGLASSES

Rudy Project offers technically advanced specialty lenses with high visual performance tailored to your needs. 3D Optical Precision lenses aim to improve visual performance and eye protection by means of selective lenses with high optical and mechanical performance, combined with the most advanced technologies and scientific applications. We developed a range of models with technical features that suits perfectly with golfer demands.

## IMPACTX PHOTOCHROMIC GOLF

The ImpactX® PHOTOCROMIC GOLF is a breakthrough in optical excellence, engineered by professional golfers. Formulated exclusively for Rudy Project, this revolutionary lens has been tailored to offer all the assets of our prestigious Golf 100 optics, but perfected with ImpactX® technology and photochromic properties, providing thus cutting-edge, truly unique climatic management technology (getting dark from 38% to 14% light transmission within few seconds), astounding clarity across the green and unparalleled eye protection.

## GOLF 100 LENS

The Golf 100 lenses provide a unique balance of target and background brightness. The transmission of 25% was tailored to accommodate for grass reflecting only a low amount on incident light. While controlling low level blue light, the middle range is selectively manipulated to provide optimum visual stimulation and distinctive "object illumination".

# SAILING

AIRGRIP SAILING  
ZYON SAILING  
SPINHAWK SAILING

## MASTERING WIND AND SEA CONDITIONS REQUIRE CUTTING-EDGE EQUIPMENT.

When you are on a boat, you need to know about equipment for the boat and personal gear that is essential or useful when sailing. Worn with confidence by pro and elite sailors, Rudy Project are the preferred polarized eyewear for sailing: our products are specifically tailored to protect your eyes from all conditions and to guarantee all the high-performance required for sailing, regattas or serious yachtsmen.

## POLAR3FX LENSES

After years of research and refinement, Polar3FX Hydrotek was perfected by combining advanced polarization processes with cutting edge hydrophobic technology, turning conventional thinking on its head. Polar3FX Hydrotek ensures the complete and thorough elimination of glare, polarized light and harmful UV rays, and will keep your vision clean preventing water droplets from forming on the lens surface. Perceived benefits include realized visual acuity, enhanced sharpness, reduced glare and managed polarity. But don't take our words for it, see yourself.

## ADJUST VENTILATION

PERIPHERAL SHIELDS - configuration

COMFORT PAD - configuration

Performance and comfort are the core concepts of the whole Rudy Project innovation process. The new comfort pads have been conceived to fulfill the needs of sailing and outdoor enthusiasts. This functional feature of the new Airgrip sunglasses is encapsulated within the temples allowing for protection from light, wind, dust and other atmospheric elements. The comfort pads are perfectly integrated with the peripheral shields: the second protecting attachment of the Airgrip model enhances protection from side light and shocks caused by eventual falls or impacts with rocks or branches. The two components are easy removable to manage different light and temperature conditions effectively.

PERIPHERAL SHIELDS and COMFORT PADS INCLUDED  
Each Airgrip comes standard with a set of  
Peripheral Shields and Comfort Pads,  
according to the configuration.

# SHOOTING HUNTING

AIRBLAST  
TRALYX XL  
RYDON

SPECIFICALLY ENGINEERED AND DESIGNED FOR SHOOTERS AND HUNTERS TO PROVIDE UNPARALLELED FIT FACTORS AND OPTICAL SUPERIORITY.

Iron will, strong nerve, concentration and perfect sight. The shooter is an athlete of patience looking for accuracy, because haste is the enemy of every good shot. So are the light, wind, dust and insects, which may adversely affect the vital concentration of the athlete.

## **SUPERIOR WRAPAROUND AND EXTRAORDINARY OPTICAL PROTECTION**

Rudy Project offers technically advanced specialty lenses with high visual performance that perfectly fits with the needs of shooters and hunters. Our shooting sunglasses are conceived to maximize the focus of the athlete on his target.

## **EAR MUFFS-COMPATIBLE FULLY ADJUSTABLE TEMPLE TIPS**

Unparalleled comfort, perfect fit; designed by biometric engineers, tested by professional shooters, the AirBlast incorporates fully adjustable rubber temple tips specifically designed for ear muffs compatibility; they are so thin you won't even notice them when wearing hearing protectors. They can be folded to follow ear back contour to enhance kick-back stability.

All the Rudy Project Stealth products are ANSI Z87.1+ certified.

## What is Z87+

ANSI Z87.1 is the American National Standard that covers the basic requirements for personal eye and face protective devices to minimize or prevent injuries from impacts, non-ionizing radiation and chemical agents in occupational, educational and military environments. This Standard sets criteria related to the description, general requirements, testing, marking, selection, care and use of these protectors.

+ is an additional requirement of ANSI Z87.1 standard which provides more strict and severe impact tests:  
Penetration (1.56 oz – 44.2 gm / 50 in – 127 cm) High Mass Impact (17.6 oz – 500 gr / 50 in – 127 cm)  
High Velocity Impact resistance (150 ft/s – 46 m/s).

## ACCESSORIES

OPTICAL GOGGLE INTERFACE

Adjustable and removable. Unique integration of the clip between Guardyan and Rudy Project goggles: Klonyx and Klonyx MX are fully compatible with Guardyan and can be worn over perfectly! Optical Insert can be swapped from Guardyan to Klonyx/Klonyx MX easily, thanks to a proprietary clip-on interface.

The need for functional and technically advanced products that provide a true comfort benefit is more valid than ever. That is the founding principle of our Apparel Collection: technically cool wear that provides a true Rudy Project attitude with superior fit and comfort. By using the highest quality fibers and advanced manufacturing techniques, our stylists have developed extremely functional and valuable garments loaded with breathable trims and cool features for the discerning Rudy Project mission makers.
